- Oxygen fail-safe
- Visual gauges to confirm calibration
- Lock out mechanism
- Continual training and support
- Complete scavenging solution
- 2 and 4 cylinder mobile cart options
- Locking wheels

What Patients Are Saying

Here are some quotes from a recent survey showing what new mothers had to say about using Nitronox during and after labor.

"Knowing I would have access to a pain aide that would not interfere with the health of my baby or my ability to move and labor in the way I wanted was very appealing."

"I liked that I was in total control and was able to regulate how much or how little I needed. I also liked the fact that the gas did not take away my ability to feel the pain or listen to what my body was telling me to do."

"During stitching after the birth - it caused me to relax and not feel the anxiety I usually have with needles or any pain associated with the experience."

The Porter Nitronox™ System is designed for hospital and office settings. System packages include: Nitronox demand flow system, scavenger interface, and either a 2 or 4 cylinder mobile cart with pin indexed connections. Cylinders not included.
